Assignment Five

Student's Name: Tara Aida   **Course Name: Computer Science 01100101**

Teacher's Name: Joe Puccio

Create a calculator that takes in a number of numbers that's defined by the user and either adds or multiplies them dependent on what the user specifies.

Example use of Scanning:

```java
Scanner scan = new Scanner(System.in);
System.out.println("Enter a starting x value");
double x = scan.nextDouble();
System.out.println(x);
```

```
The code above outputs:

Enter a starting x value

[then the program waits for the user to type in a double]

[then the program prints out the value the user set for x]
```

Send your source code to the following email address for grading:
